İstanbul, Türkiye · Open to Remote & Relocation

SUMMARY

Mobile engineer with 4 years building production apps for iOS and Android: Flutter and Dart on the client, native modules in Swift and Kotlin when a feature needs the platform layer, and Node.js/Express on the backend when a service is missing. I have shipped **9 apps to the App Store entirely on my own** and published **2 open-source packages**, alongside company-scale work including the architectural refactor of an app with 4,700+ reviews and a rebuild that cut cold start by ~44%. I care most about what users feel but rarely name: how fast an app opens, whether it works without a connection, and whether a retry can quietly corrupt their data.

EXPERIENCE

Nodelabs Software

06/2025 — 08/2026

Mobile Engineer (Flutter)

Remote

- Built and optimized production Flutter apps across 10+ projects using Clean Architecture and Bloc.
- Took ownership of the architectural refactor of a live app with **4,700+ reviews**: split features into separate modules and stabilised release quality without breaking existing users.
- Improved cold start by ~44% through state hoisting, deferred asset loading and removing work from the startup path, measured on real devices in profile mode.
- Shipped real-time voice and video features with VideoSDK and WebSocket signalling (Amore, live on the App Store).

Iwwomi

01/2025 — 06/2025

Mobile Engineer (Flutter · Node.js)

İstanbul

- Led the full Bloc + Clean Architecture rewrite of TRHaber, a news platform serving thousands of daily users, and shipped it to the App Store and Google Play.
- Built the customer and driver apps for a ride-hailing platform: real-time ride tracking on the map, driver dispatch sync, and a background location service surviving Doze mode and device restarts. Integrated Stripe payments with idempotent retries so a network failure or double tap could not create a second charge.
- Wrote the Node.js/Express endpoints powering driver dispatch and real-time ride-state sync between both clients.

Freelance & Contract Mobile Engineer

2022 — 2025

Flutter · Dart · Node.js

Remote

- Delivered production Flutter apps to international clients on Fiverr with a 5.0 rating across delivery and bug-fix work.
- Built an accessibility-focused Flutter (Provider) + Node.js/REST application for a client engagement (JuniusTech).
- Alongside client work, independently designed, built and shipped the apps listed on the next page.

PITON Technology

09/2022 — 08/2023

Flutter Developer Intern

Eskişehir

- Built Flutter features in a professional product environment (Provider, Clean Architecture) with senior code reviews and release-quality implementation.

SHIPPED SOLO — 9 LIVE APP STORE APPS

Every app below was built by me alone: the idea, the design, the Flutter code, the backend, the store listing, App Store review, and maintenance after launch. No team, no designer, no ad budget. Roughly **35,000 downloads** across the top three, all of it organic.

SoundCare — Water Eject & Speaker Cleaner · ~15,000 downloads

Clears water from a phone speaker using generated sound frequencies. Animation-driven interface, RevenueCat subscriptions across six price tiers, Firebase and Mixpanel funnels. Paywall placed after the user has seen the feature work, not before.

Random Picker — Spin Wheel · ~10,000 downloads

Decision tools: spin wheel, dice, coin flip, team splitter. Custom animation and haptics.

Inventory Scanner — Stock Count · ~10,000 downloads

Barcode scanning with CSV import and export for stock counting. Offline-first: counts are stored locally and reconciled when a connection returns.

Subi — Bills & Subscriptions

Subscription and bill tracker. Firebase Auth and Firestore sync across devices, offline-first guest mode so the app is usable before signing in, and push reminders before a payment is due.

Verde — AI Backyard Design

Generates landscape and backyard design plans from a photo using an AI image pipeline, with credit-based monetization.

Gallery Cleaner — Swipe Photos

Swipe-based photo cleanup over large local libraries. Batch deletion with undo, tuned so scrolling thousands of assets stays smooth.

Focsy — Offline Brain Games

Brain training games that work fully offline, with local progress tracking.

SwipeCine — Movies to Watch

Swipe-to-discover film recommendations over a third-party movie API, with a local watchlist.

연차 계산기 — Korean Annual Leave Calculator

Annual leave calculator built for Korean labour law, localised for the Korean App Store.

OPEN SOURCE

document_scan · published on pub.dev · MIT

Headless document scanner for Flutter. Corner detection and perspective correction run natively — Apple Vision on iOS, OpenCV on Android — bridged through platform channels behind a single API. Heavy processing runs in an isolate so the UI never blocks.

image_compressor · published on pub.dev · MIT

Compresses an image to a target file size in a single call, for predictable upload sizes and faster transfers.

live-location-track · open source

Consent-based live location sharing between two phones, with a live map and daily route history. The background layer is a **native Kotlin foreground service**: a dual-alarm scheme keeps it alive under Doze, it recovers in ~30 seconds after a force-stop and automatically after a reboot, and it drops to longer intervals below 20% battery. Realtime Database for live data, Firestore for queryable history and an offline queue. **188 tests**, including Firebase security-rule tests, and documented measurements from a real device over a full night.

OTHER WORK

ImageFlow — Real-Time On-Device Image Pipeline

Sub-200ms on-device face and document detection, bridging Flutter to native Swift (Vision) and Kotlin (OpenCV) with isolate-based processing and no cloud round-trip.

TaxiEMS — Ride Booking Platform

Customer and driver apps with live tracking, dispatch sync and Stripe payments with idempotent retries.

Site Management — Graduation Project

Apartment and estate management built as three connected apps: resident, management and staff. Flutter with Firebase, plus Zego Cloud for real-time communication between residents and management. Covers announcements, dues tracking and request handling.

GreenScore — Recycling App

Recycling assistant with AI-based waste classification from a photo and a scoring system. Second place, GDSC Hackathon '24.

MediFinder — Healthcare Provider Discovery

Case study: location-based provider search with map clustering and filtering.

JoyLive — Live Streaming Platform

Live streaming client with real-time chat, gifting and viewer presence.

TECHNICAL SKILLS

Languages & Frameworks: Dart, Flutter, Swift, Kotlin, JavaScript, TypeScript, Node.js, Express.js

State & Architecture: Bloc, Riverpod, Provider, GetX, Clean Architecture, MVVM, feature-based modularisation, dependency injection (get_it / injectable)

Native Platform Layer: Method Channels · iOS: Apple Vision, Keychain, background tasks · Android: OpenCV, Keystore, Foreground Service, Doze mode and manufacturer-specific process handling · isolates for non-blocking heavy work

Location & Device: Real-time and background location services, map integration, route history, camera, document scanning, service continuity across reboots

Data & Realtime: REST, WebSocket, JWT/OAuth2, Firebase (Auth / Firestore / Realtime Database / FCM), MongoDB, local storage (Hive, SQLite, SharedPreferences), offline-first sync with idempotent queues

Monetization & Analytics: RevenueCat (subscriptions, price-tier testing, paywall placement), AdMob, Firebase Analytics, Mixpanel funnels, Crashlytics, Sentry

UI & Design: Figma to pixel-perfect implementation, responsive and adaptive layouts, Material Design 3, Apple Human Interface Guidelines, reusable component systems, animation-driven interfaces

Testing & Quality: Unit, widget and integration testing, security-rule testing, code review, performance profiling and memory debugging on real devices

Release & Process: App Store Connect, TestFlight, Google Play Console, permission justification and privacy declarations, review resubmission, CI/CD (GitHub Actions, Fastlane), Git · Agile / Scrum · AI tooling: Cursor, Claude, Copilot

EDUCATION, AWARD & LANGUAGES

Eskişehir Osmangazi University — *B.Sc. Computer Engineering*

2020 — 2025

Award: Second place, GDSC Hackathon '24 — Gemini AI + Firebase app, 20+ competing teams ·

Languages: Turkish (native), English (professional working) · **Open Source:** 45+ public GitHub repositories
